TEC4 COOLING SYSTEM CLEANER

Modern cooling systems are required to dissipate a significant amount of heat generated due to finer tolerances within the engine. Tec4 Cooling System Cleaner is a highly concentrated technically advanced formulation designed to effectively remove the harmful contamination.

1 A COMBINATION OF 4 TECHNOLOGIES:

- Dissolves scale.
- Dissolves rust.
- Removes the gel formed when different coolants are mixed.
- Holds contaminants in suspension.

2 KEY BENEFITS:

- Cleans cooling system components & provides anti wear protection.
- Dissolves scale build up on from the radiator and water jacket.
- Loosens rust.
- Restores cooling system efficiency.
- Improves heater efficiency.
- Removes the gel formed when Mono Ethylene Glycol based antifreeze and OAT coolant is mixed.

DIRECTIONS FOR USE:

Tec4 Cooling System Cleaner is a blend of inorganic inhibitors and cleaning agents which gently loosen and dissolve scale and rust from the cooling system. These contaminants are held in suspension and removed when the cooling system is drained. In order to maintain cooling system efficiency and restore lost performance it is recommended that the cooling system be cleaned regularly at service intervals.

- Add one 400ml bottle of Tec4 Cooling System Cleaner to the cooling system prior to changing the coolant. Idle the engine for 10–15 minutes.
- For engines that have not had the cooling system regularly cleaned idle for 20–30 minutes.
