TEC4 COOLING SYSTEM IMPROVER

Modern cooling systems are required to dissipate a significant amount of heat generated due to finer tolerances within the engine.

Tec4 Cooling System Improver is a highly concentrated technically advanced formulation designed to improve the efficiency of the cooling system.

1 A COMBINATION OF 4 TECHNOLOGIES:

- Eliminates oxygen from the cooling system.
- Prevents scale build-up.
- Prevents electrolytic corrosion.
- Provides water pump impeller shaft lubrication.

2 KEY BENEFITS:

- Eliminates oxygen from the cooling system.
- Improves cooling system efficiency.
- Improves heater efficiency.
- Inhibits corrosion build up.
- Prevents scale formation.
- Provides lubrication to the water pump impeller shaft.

DIRECTIONS FOR USE:

Tec4 Cooling System Improver is a blend of inorganic chemicals and corrosion inhibitors which combine to improve lubrication, inhibit corrosion build up and reduce the oxygen content of the coolant resulting in a significant improvement in the cooling systems ability to dissipate heat.

The product is compatible with all glycol-based anti-freeze formulations and OAT coolants.

- Add one 400ml bottle of **Tec4 Cooling System Improver** to the cooling system.
- For larger capacity engines add at 10% by volume.
- It is recommended that the cooling system be flushed with **Tec4 Cooling System Cleaner** prior to the application of **Tec4 Cooling System Improver**.
