

PROFESSIONAL GRADE  
FUEL SAVING PRODUCTS

# TEC4 AIR INTAKE & EGR CLEANER

Heavy duty fast acting cleaner.

Dissolves carbon build up and sticky residue, caused by oil mist and exhaust fumes which build up in the air intake system and on EGR valves.

## 1 THE SYMPTOMS OF A FAULTY EGR:

- Hesitation.
- Stumbling.
- Excessive emissions/smoke during acceleration.
- Engine warning lights.

As deposits begin to accumulate this restricts the flow of gases and disturbs the fuel mixture. The ECU is expecting a certain amount of recirculating gases as the EGR valve transitions from closed to open and visa-versa. These gases are not delivered as anticipated hence the disturbance in the air/fuel ratio. This can result in hesitation, stumbling and excess emissions, particularly during acceleration.

## 2 PRODUCTS TO CLEAN THE EGR:

- Intake Spray Carbon Cleaner (Intake, EGR, Turbo etc.): **EcoTec EGR & Turbo Cleaner**.
- For rapid fuel system cleaning: **AR6400** (petrol) or **AR6400-D** (diesel).
- Fuel conditioning, protection and carbon reduction: **AR6200** (petrol or diesel) or **AR6800** (diesel only).
- Nano oil additive pack to reduce circulating oil build-up in the EGR: **AR9100**.
